

HARIOM MISHRA

+91-8707090580 | mishrahariom43271@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Summary

Software Engineer specializing in full-stack development and AI engineering, building scalable web applications, backend services, and AI-powered systems using RAG, vector embeddings, and LLM integrations.

Projects

SkillForge — Multi Agents Career Preparation Platform [GitHub](#)

(*React.js, Node.js, Express.js, RAG, MongoDB, Redis*)

- Architected a **5-service microservices platform** (auth, billing, interview, resume, roadmap) behind an API gateway delivering AI mock interviews, resume analysis, and LangGraph-powered personalized roadmaps, reducing career prep time by **40%**
- Deployed a **RAG-powered resume analyzer** using Qdrant vector DB and Gemini embeddings with Redis caching, delivering **40% more actionable feedback** than keyword-only ATS tools at **sub-150ms** response times
- Delivered an **AI mock interview flow** on a **3-node LangGraph pipeline** (question generation → feedback → summary), scoring every answer across **8 rubric dimensions** (correctness, clarity, communication, etc.), with results cached in **Redis for 10 min** so a reopened dashboard loads instantly instead of re-querying MongoDB
- Engineered a **Redis-backed rate limiter** in the API gateway, capping LLM-calling routes to **20 interview / 10 roadmap** requests per hour per user, bounding worst-case Groq spend.

Agentic Calendar — AI Assistant for Google Calendar [GitHub](#)

(*Next.js 16, Node.js, Express.js, Mastra AI, Descope MCP, PostgreSQL, Gemini*)

- Designed an **autonomous AI scheduling agent** using Mastra AI that understands natural language requests like “schedule a sync with John tomorrow afternoon” reducing calendar management clicks by **80%** vs. manual scheduling
- Implemented **secure Google Calendar access** via Descope MCP with **100% OAuth-compliant** tool calls, and configured **persistent cross-session memory** on PostgreSQL cutting repetitive prompting by **70%** with real-time SSE streaming
- Streamed agent replies over **SSE with a 5-stage event protocol** (started, progress, token, completed, error), so a tool call like a free/busy check shows up as live status text instead of a blank spinner
- Gave the agent a **free/busy conflict-check tool** alongside its **5 scheduling tools**, and built an **optimistic chat UI** that renders the user’s message immediately instead of waiting on the full round trip

Vertex — AI Learning Platform [GitHub](#)

(*Next.js, React.js, TypeScript, Clerk, PostHog, Tailwind CSS, shadcn/ui*)

- Shipped a **production-ready video learning platform** with natural language search seeking to the **exact second** a topic is discussed reducing content discovery time by **65%** and integrating **Sanity headless CMS** for real-time catalog management
- Optimized **Clerk RBAC** separating student portals from admin dashboards, and instrumented **PostHog analytics** across **100% of user sessions** enabling data-driven content optimization that reduced churn by **30%**
- Built a **video watch-depth tracker** that fires PostHog milestones at **25/50/75/95% watched** and infers lesson completion at the **95% mark**, since the embedded provider iframes emit no native playback events
- Mitigated excessive AI search query expenses by implementing a **per-user rate limit of 10 requests per minute**, preventing unbounded GPT-5 tool-loop costs.

Technical Skills

AI/ML: RAG, Vector Embeddings, LLM Integrations

Backend: Node.js, Express.js, REST APIs, tRPC, Microservices

Databases: MongoDB, SQL, Supabase, Redis

Frontend: React.js, Next.js, Tailwind CSS

Languages: Java, JavaScript, TypeScript

DevOps & Tools: Git, GitHub, Postman, Jest, npm, Sanity CMS, PostHog

Education

Dronacharya Group of Institutions, Greater Noida

2023 – 2027

Bachelor of Technology in Information Technology

Dwivedi Paradise School and College

2021 – 2022

Class 12 (Senior Secondary)
